Application instructions - *Hinge technique*

Version 4.1 (Transparent Tape)

Your graphic will be covered with a transpaerent "Application Tape" on one side, and a white "Release Liner" on the other - Do not remove these layers yet.

1. Position the graphic at the correct location, and temporarily hold the graphic in place with masking tape.
It's a good idea to have an assistant hold the graphic for you; he or she can also help position the graphic.

2. Next, use a piece of masking tape, to create a hinge along the top of the graphic. Once your graphic is in position; smooth firmly over the graphic using an old credit card. This will ensure that the vinyl lettering sticks to the application tape.

3. Lift up the graphic and peel back the white release liner. This will expose the sticky side of the graphic.
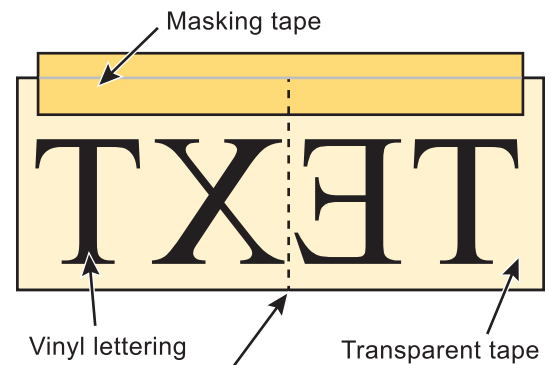

Make sure you don't allow the graphic to swing back down and touch the glass, or it may stick prematurely in the wrong position.

4. Now use the old credit card to press firmly down on the graphic, in a top to bottom motion (so as not to trap air bubbles).

Tip: Check from the outside, that the graphic has been thoroughly pressed onto the glass.

5. Now, peel away application tape to reveal the lettering.

Note: The application tape's adhesive is not as sticky as the adhesive used on th vinyl text; therefore, it will leave the text in place as it is peeled away!

Masking tape

Vinyl lettering

Transparent tape

Optional:
Slit the graphic between characters, to make installation more manageable

Note: Your graphic may already be divided into smaller sections.
